

§ 149.575

(c) If an STL protrudes from the water, it must be properly illuminated in accordance with §149.540.

§ 149.575 How must objects protruding from the water, other than platforms and single point moorings, be marked?

(a) Each object protruding from the water that is within 100 yards of a platform or single point mooring (SPM) must be marked with white reflective tape.

(b) Each object protruding from the water that is more than 100 yards from a platform or SPM must meet the obstruction lighting requirements in this subpart for a platform.

§ 149.580 What are the requirements for a radar beacon?

(a) A radar beacon (RACON) must be located on the tallest platform of a pumping platform complex or other fixed structure of the deepwater port.

(b) The RACON must be an FCC-accepted RACON or a similar type.

(c) The RACON must transmit:

(1) In both 2900–3100 MHz and 9300–9500 MHz frequency bands; or

(2) If installed before July 8, 1991, in the 9320–9500 MHz frequency band; and

(3) Transmit a signal of at least 250 milliwatts radiated power that is omnidirectional and polarized in the horizontal plane;

(4) Transmit a two-element or more Morse code character, the length of which does not exceed 25 percent of the radar range expected to be used by vessels operating in the area;

(5) If of the frequency agile type, be programmed so that it will respond at

33 CFR Ch. I (7–1–10 Edition)

least 40 percent of the time, but not more than 90 percent of the time, with a response-time duration of at least 24 seconds; and

(6) Be located at a minimum height of 15 feet above the highest deck of the platform and where the structure of the platform, or equipment mounted on the platform, does not obstruct the signal propagation in any direction.

§ 149.585 What are the requirements for sound signals?

(a) Each pumping platform complex must have a sound signal, approved under subpart 67.10 of this chapter, that has a 2-mile (3-kilometer) range. A list of Coast Guard-approved sound signals is available from any District Commander.

(b) Each sound signal must be:

(1) Located at least 10 feet, but not more than 150 feet, above mean high water; and

(2) Located where the structure of the platform, or equipment mounted on it, does not obstruct the sound of the signal in any direction.

Subpart F—Design and Equipment

GENERAL

§ 149.600 What does this subpart do?

This subpart provides general requirements for equipment and design on deepwater ports.

§ 149.610 What must the District Commander be notified of and when?

The District Commander must be notified of the following:

When—	The District Commander must be notified—
(a) Construction of a pipeline, platform, or single point mooring (SPM) is planned.	At least 30 days before construction begins.
(b) Construction of a pipeline, platform, or SPM begins	Within 24 hours, from the date construction begins, that the lights and sound signals are in use at the construction site.
(c) A light or sound signal is changed during construction	Within 24 hours of the change.
(d) Lights or sound signals used during construction of a platform, buoy, or SPM are replaced by permanent fixtures to meet the requirements of this part.	Within 24 hours of replacement.
(e) The first cargo transfer operation begins	At least 60 days before the operation.

§ 149.615 What construction drawings and specifications are required?

(a) To show compliance with the Act and this subchapter, the licensee must

submit to the Commandant (CG–5) or accepted Certifying Entity (CE) at least three copies of:
